

FTTx/POC – Point of Connection

A flexible connection point located near to customer's premises supporting various network architecture types

HIGHLIGHTS - that build smiles...

Designed to support whatever network types you have installed today and to be flexible and scalable to support your next generation of network needs including high speed PON.

O-to-O

OPTICAL to OPTICAL

Fibre based networks with full passive PON connectivity.

O-to-E

OPTICAL to ELECTRICAL

Coaxial based networks with optical distribution to customers.

E-to-O

ELECTRICAL to OPTICAL

Optically fed with RF distribution to customers.

E-to-E

ELECTRICAL to ELECTRICAL

Coaxial based networks fed via Coax and with RF distribution to customers.

FTTx/POP - Point of Presence

A hub level cabinet designed for flexible
fibre optic distribution

HIGHLIGHTS - that build smiles...

Designed to feed the POC enclosures, the Teleste POP's (288f/432f/576f) are available in both passive and active designs. The solution gives a planned and standardized evolution path towards fully optical network architectures.

HIGH QUALITY POINT OF PRESENCE

The solution provides a standardized evolution path towards fully optical network architectures.

ALUMINIUM DOUBLE WALL CABINETS

We offer light weight, high corrosion resistant cabinet solutions, having optimal thermal efficiency which allows heat to dissipate through the material.

PREVENTING DOWNTIME

IP6X compliant cabinets that safely protects electrical components - being dust-tight and protects against heavy seas (100 l / min).

PROTECTION GUARANTEED

Security is top priority - our solution conforms to IK10, which is the highest IK impact protection rating.
