FTTH - Singlemode - 2-4 Fibres Subscriber Distribution Cable

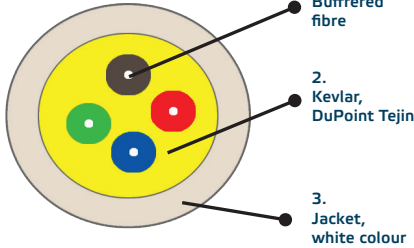

An ideal cable intended for visible installation by non-professionals (requires no expertise to install) in conjunction with FTTH and PON network roll-outs. The cable is white and unlabelled which makes it an optimal choice for use in modern and contemporary homes.

The cable is commonly used to interconnect the customer gateway/outlet and the Teleste fibre interface box (published in a separate datasheet). The cable consists of 2 or 4 fibres, 0.9 mm, and is available in different lengths. By default, high-quality SC-UPC/APC or LC-UPC connectors are terminated in one end. Other connector configurations can also be supplied, e.g. assemblies having connectors terminated in both ends. Our factory terminated connectors are inspected and measured after polishing. The limit values follows in the next page. Likewise we always measure the insertion loss (IL) and the return loss (RL), those are documented and an individual measurement report is

provided for each manufactured assembly. The cable consists of 2 or 4 fibres, 0.9 mm, and is available in different lengths. The connector terminated cable end is stripped, providing a stripped length of 30 cm for coiling of the fibres in gateways and outlets. In the transition between the jacket and the stripped fibres an effective bend/strain relief design is fitted to protect the cable from tight bends and fatigue loading. The cable incorporates Corning® ClearCurve® LBL optical fibre, a full-spectrum fibre with enhanced macrobend performance compared to traditional improved bend singlemode fibres.
