Table 2. Items affected

Item	Description
CPT541	1-ch compact video transmitter, 1310/1550 nm, SM fibre
CRR541	1-ch video receiver, 5HP card, 1550/1310 nm, SM fibre
Customer versions	Some customer specific models of above (more information available from Product Management)

Product migration and replacement options and their availability:

CFO541 video link is removed from the sales due to obsolete components.

A replacement is available as **CFO521 series video link** (CPT521 & CRR521 incl. customer versions) which has been modified to meet the following requirements

- operational temperature range -34...+74 deg.C
- typical transmission distance of 40 km (available link budget >17 dB)
- fully compatible with CFO541 series

Note 1: The obsolete announcement does not concern the special transmitter module **CCT541** for Pelco Domes (valid receiver for this is CRR521).

Note 2: The dates above do not change the dates that might have been committed in separate agreements between Teleste Corporation and the customer.

More information: Contact your the nearest Teleste Sales Office or Teleste Corporation (Product Management, Video Networks).

*) Products older than seven (7) years shall be repaired if considered possible and reasonable. Spare part units are based on limited stock and available quantities are subject to change without notice.
