

INFORMATION NOTICE FOR CONNECTED PRODUCTS

Teleste On-board solutions audio communication system product family

Introduction

This information notice provides users of the Teleste On-board solutions audio communication system product family with information on product data generated by the connected product and on the methods available for accessing and deleting such data, in accordance with Article 3(2) of the EU Data Act.

As used in this information notice, “product data” means raw and pre-processed data generated by the use of a connected product that Teleste has designed to be retrievable. The actual generation and retrieval of product data depend on the installed Teleste On-board applications and services, as well as choices made by the customer or end user.

1. Type, format and estimated volume of product data

The connected product may generate or store the following categories of product data:

Type of product data	Format and access interface	Estimated volume and frequency
Technical logs	Technical logs can be accessed by logging into the device and loading the contents of the log file folder	The typical volume equals the total capacity reserved for technical logs in the partition

All exports require sufficient user rights.

2. Continuous and real-time data generation

The connected product generates product data continuously and in real time during operation.

3. Product data storage

Product data is stored locally on the device during the runtime of the device. Technical logs are stored as looping material. When the loop is full, the oldest material is replaced with newer material.

4. Data access and deletion methods

Data access requires appropriate user rights, system permissions and, where applicable, customer or end-user administrator approval.

Where product data is directly accessible on the device, deletion can be made by the user. Deletion may also occur automatically through restarting of the device, retention settings and looping storage mechanisms configured for the system.

5. Third-party operating systems and components

For information regarding data practices related to the operating system of the connected product, including telemetry, diagnostics or usage data, please refer to the applicable data notice or privacy documentation provided by the relevant operating system developer or data controller, such as Microsoft, Google or Canonical. Teleste does not control or determine the data collected by third-party operating systems.
